VOA Broadcasting in French to Africa

VOA's French to Africa Service produces a broad mix of news and interactive programming for radio, television, and the Internet. On shortwave radio, VOA targets to 22 francophone countries in sub-Saharan Africa, and has FM transmitters operating in several key capitals across the region. VOA provides an alternative to state-owned and/or supported media that dominate the airwaves in many of these countries. Although independent radio and television stations are making some advances, many remain subject to government interference.
